1

Chapter Title

By defining ContentType for an element, you can selectively hide it.

This Text is in English (contentType "en"), and shows in green.

1+1=2

1.1 Major Sections

This is a Section 1, it will contain your major headings.

1.2 It is possible to make a whole section monolingual

This would be useful for a task that only needs further explanation in one language (like a broken interface).

1.3 Mix and Match

- Start ParaTEXT using an icon on the desktop.
- Effectively use the navigation toolbar to navigate to the desired book, chapter, or verse.
- Type text in an open project within USFM markers such as \c, \v, etc. in an appropriate view.
- Use a keyboarding system (Microsoft Keyboards, or Keyman) to type special characters.
- Add additional elements such as section titles.

1. Open supplementary resources, for example English bibles.
2. Arrange multiple windows on the screen.
3. Use Send/Receive to back up the project on the Internet or on a USB key.
4. Run Verifications to assure that all chapters and verses are present.
5. Run Verifications to guarantee that the text is correctly marked (markers, styles, etc.).
6. Run Verifications to see that all characters and punctuation symbols are valid in the target language with help from the Inventories.
7. Correct spelling mistakes using **Spell Check**

1.3.1 2nd Level Sections

2

Thing

It is possible to alternate images.
Or even to put an image mid-paragraph.

2.1 Introduction
