## Chapter TitleTitre du Chapitre

By defining ContentType for an element, you can selectively hide it.

This Text is in English (contentType "en"), and shows in green.

1+1=2

### 1.1 Major SectionsSections majeures

This is a Section 1, it will contain your major headings.

### 1.2 It is possible to make a whole section monolingual

This would be useful for a task that only needs further explanation in one language (like a broken interface).

### 1.3 Mix and MatchMelange

- Start ParaTEXT using an icon on the desktop.
- Effectively use the navigation toolbar to navigate to the desired book, chapter, or verse.
- Type text in an open project within USFM markers such as \c, \v, etc. in an appropriate view.
- Use a keyboarding system (Microsoft Keyboards, or Keyman) to type special characters.
- Add additional elements such as section titles.

1. Open supplementary resources, for example English bibles.
2. Arrange multiple windows on the screen.
3. Use Send/Receive to back up the project on the Internet or on a USB key.
4. Run Verifications to assure that all chapters and verses are present.
5. Run Verifications to guarantee that the text is correctly marked (markers, styles, etc.).
6. Run Verifications to see that all characters and punctuation symbols are valid in the target language with help from the Inventories.
7. Correct spelling mistakes using **Spell Check**

**1.3.1 2nd Level SectionsSections de deuxième niveau.**

# 2

## ThingChose

It is possible to alternate images.  
Or even to put an image mid-paragraph.

### 2.1 Introduction

Gooof

### 2.2 SummaryRésumé

Ce module vous montre comment :

Tâche	Bilan d'étapes	Steps
Lancer le programme Paratext	Double-cliquez sur l'icône Paratext 7 dans le bureau Cliquez sur le menu <b>Fenêtre</b>	First Paragraph
Ouvrir combinaison de fenêtres		
Créer un nouveau arrangement	Si vous n'avez pas encore enregistré une combinaison de fenêtres, on vous suggère de faire comme au-dessous	<b>Content</b>
